Lincoln town car alarm keeps going off

Automotive Forums. The alarm in my Town Car goes off periodically. Ford can not find the problem and says no one else is having this problem. I find that hard to believe. Independent mechanics have also looked at the car and were unable to find the problem. Well, it can't be duplicated and it happens infrequently, so is anyone familiar with this problem??? I havn't heard of this in Town Car, or The cure was to remove the switches, clean them up, lube with some appropriate spray, re-install. Also, very important, check the Hood Switch as well, I dont think that one can be cleaned, but check it anyway, it's on the RT top fender apron, under the hood. There are also switches mounted on the lock cylinders, both doors, and the trunk that may be defective under certain conditions I have that problem. The car sits behind my office during the day. Occasionally the horn starts honking as if the alarm was triggered. I can stop it with my key fob. It does shut off after some minutes if I am not around. Averages about once a month. More recently the horn has started tooting while the car is sitting in my garage at home. This is not the repeated toot like the alarm has triggered. This is just a random toot or honk. Sometimes I think the car is haunted. I have talked to the dealer, but it is too intermittent for them to find the problem. I thought it was neighborhood cats in my driveway. But it happens in my garage at work and just about everywhere. Let's keep this going to see if we can find the culprit Thanks for the info I eventually removed the horn relay from the fuse and relay box under the hood. This stopped all horn blowing. However, last week I donated the car to a charity. Just didn't want to deal with all the crazy problems it was developing. Should make for a decent tax write off. I have this on my 91 too. Alarm goes off when door are open and car unlocked. Quite random. I have a new Nissan Maxima and I am having the same problem. The alarm goes off for no reason for a few minutes and then stops and then does it again. Last night it started going off at a. The delaer says they tested my electrical system and cannot find anything wrong. My neighbors are ready to shoot me. It doesn't matter if the system is set or the doors are unlocked. If i leave it parked for days it runs down the battery. Anyone have any ideas? The problem gets even more frustrating at night when people are sleeping, and suddenly your car alarm goes off without any apparent reason. Why does this happen? Luckily the alarm is not getting off every time because of a thief; sometimes, a faulty installation or other reasons also cause the alarm to go off. A bad car battery or low battery charge is a widespread problem for a car alarm that goes off during the night. If you hear the car alarm going off at night and the car battery is dead in the morning, the car battery may be bad. If your car battery is going off, but you can still start your car without any problems, it is most likely something else faulty, though. You can test your car battery with a car battery tester , to see how good it is and replace it if it is bad. A sensitive shock or movement sensor tends to trigger the alarm even if a dog or a cat gently touches your car. The type of shock sensors and movement sensors you have in your car depends a lot on your car model and if the car alarm is an aftermarket alarm system installed in your car or a car alarm from the factory. In some car models with a car alarm from the factory, you can program the sensitiveness of the shock and movement sensors with a diagnostic scanner. This is often needed on cars like Audi and Volkswagen because their sensors are over-sensitive from the factory and will go off sometimes. Some aftermarket car alarm systems do also have adjustable sensors. Check the car alarm manual for more information. To fix this problem, locate the sensor and have it cleaned. If you can still hear the alarm sound, it is possible that someone tried to tamper with the sensor or the sensor is damaged. Replace the sensor if you think it may be faulty. You can find the hood latch sensor inside the hood lock most of the time, but it can also be installed externally. The same as with the hood latch sensor, your car alarm monitors your car doors to make sure no one is opening your door. Therefore a faulty door latch sensor can cause the car alarm to go off. The door latch sensor is often installed inside the door lock actuator but can sometimes be installed externally from the lock. A door latch sensor usually has two wires to it, which are open circuit when the door is open or closed circuit when the door is closed or vice versa. This makes it pretty easy to measure with a multimeter. The door actuators are often located inside the door, though, so it might be a little bit difficult to measure if you do not measure from the control unit instead. You can check and replace the essential key fob batteries or reset the device to fix the problem. When you have replaced the batteries, and you have communication problems, you may have to reprogram your key fobs in some situations. If you have recently installed a new car alarm system and noticed that the alarm keeps going off for no reason, it may be because of incorrect installation. In case you let a mechanic workshop install it, go back and explain your problem, and if you installed it by yourself, it is time to recheck the installation manual and double-check everything. Car alarms installed from the factory often have an integrated alarm control unit and a main electric component control unit, so a faulty control module is not common. An aftermarket car alarm often has an alarm control module that controls all sensors and switches; if this control module fails, it may cause the car alarm to go off now and then. I have been

working with cars for 10 years, specialized in diagnostics and troubleshooting. I created this blog because I was tired of finding false information on the web while looking for repair information. I hope you enjoy my content! The car alarm buzzing for no reason is a common issue reported by many people. Contents show. Faulty Hood Latch Sensor. Faulty Door Lock Sensor. Faulty Key Fob. Incorrect Installation of the Alarm. Bad Alarm Control Module. Search This Site Search. Hi, my car alarm keeps going off for no reason in my lincoln town car. Goes off about every days, usually at night?? Any ideas? Thanks, Patty. Will this happen at other places and times? Is your battery maintiance up no corrosion Factory alarm? My 95 Ranger does the same thing, if I lock it with the power locks that arms the system. Horn invariable starts honking at 2AM. Is it the same factory horn-alarm? A bit of wild guessing here regarding a couple of possibilities. One is an erratic hood switch which lets the car know if someone is prying the hood open. Body panel fit is altered over time due to movement of the car and miles. This panel movement is normal and can lead to the switch teetering on the edge so to speak. Another possibility is the anti-theft switch in the ignition switch. Even gusts of wind can shake the car and set them off. And testing them may not be so clear cut either. Hope that helps. You might want to take a look at Edmunds Car Space forums. Those darn squirrels! I have a periemter sensor on my car which gets triggered off by stray squirrels. Ya, there really is no good answer. The factory alarm has no sensitivity adjustment and no motion sensing. The most likely causes are:. This is an aftermarket alarm. Did you have it installed or did a previous owner do it. Thanks for your reply. The most likely causes are: You or someone else is accidentally hitting the panic button on the remote. This can happen with the remote in your pocket. Try hanging the remotes up somewhere and see if the problem stops. Car battery problems. If your car battery is the original factory battery, then it is overdue for replacement. Problems with one or more of the door, trunk, or hood switches. Your car alarm is going off again, and your neighbors are livid. No thieves are nearby, so why is it sounding off? And how about those poor shoppers who leave the store after a fun day of browsing only to be met with that constant, annoying blaring from your car? If your car alarm is going off for no apparent reason even though you've pressed the chirper several times and you don't have the time or funds to take it to your dealer or installer for a check-up, here are a few suggestions for how you can end the noiseat least temporarily. Find the shut-off switch for your alarm system. When your alarm was installed, the installer most likely equipped it with a shut-off switch to allow you to turn off your alarm system at any time. The shut-off switch is usually located below your steering wheel near your feet and is hidden so that thieves can't find it. Your installer should have shown you where it is. You may have to hold it down for three or four seconds for the system to shut down. Disconnect the fuse on the alarm in your fuse box. The fuse for the car alarm should be marked on the box, or you may have to look at your car owner's manual to figure out which fuse to remove. Try resetting the alarm system. One possibility is to put the key in the car door, turn to lock the door, then turn again to open it in order to reset the alarm. Other tricks and processes could help you reset your alarm system, depending on your car model. See the Resources section for another method for resetting your car alarm. Disconnect the battery. This option is a last-case scenario. Turn off your car and remove the keys. Two cords that power your car run up to the top of the battery where they are screwed on think of the positive and negative connectors you use when you jump start your car. Use a wrench to unscrew the side nut of each connector. Do the negative side first, and when you reconnect the battery put the negative side back on first. You should be able to lift the connector up and off of the battery. This method is most helpful when you have a car alarm that is going off at night, or when you are not actively using the car. Louise Balle has been writing Web articles since , covering everything from business promotion to topics on beauty. Her work can be found on various websites. She has a small-business background and experience as a layout and graphics designer for Web and book projects. Step 1 Find the shut-off switch for your alarm system. Step 2 Disconnect the fuse on the alarm in your fuse box. Step 3 Try resetting the alarm system. Warnings Always use extra care when handling your car battery's connectors. Wear rubber gloves for added protection. Keep in mind that when you reconnect your car battery, the alarm will probably start to go off again immediately. You also have to be forewarned that disconnecting the battery could affect your car's computer system and possibly create further problems. My Lincoln Town Car's passenger seat belt has a series of 5 chimes. Turn the key into the unlock position and hold it for two seconds before opening the door. Put the key in the driver's door and turn it twice to the right, then twice to the left. You should be able to lift the connector up and off of the battery. Try resetting the alarm system. Almost all alarms, both factory installed and aftermarket systems, will shut off and reset when the car is started.
